

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1.-4. (cancelled)

5. (currently amended) A pipe coupling for joining a first pipe to pipes of varying diameters, comprising,
a first hollow fitting having opposite first and second ends,
 with the first end being adapted for connection to a first pipe,
a second hollow fitting having first and second ends with the
 second end fitting slidably within the second end of the
 first hollow fitting in sealed condition to define a fluid
 conduit extending through interiors of the first and second
 hollow fittings,
first and second adjacent wells in the second hollow fitting,
 with the first well being adjacent the second end of the
 second fitting and having an upper end terminating in the
 first well, with both the first and second wells comprising
 at least a part of the fluid conduit,
the first and second wells being cylindrical in shape with the
 second well having a diameter greater than the diameter of
 the first well, whereupon inlet pipes having outside
 diameters complimentary in size to the diameters of the
 wells can be selectively and alternately secured within the
 respective wells to fluidly connect such pipes to the fluid
 conduit and the first hollow fitting; and

a pressurized fluid supply pipe having an end secured within one
of the wells; and
wherein at least one well has adhesive therein for securing the
well to a pressurized fluid supply therein.

6.-9. (cancelled)

10. (currently amended) A pipe coupling for joining a first pipe
to pipes of varying diameters, comprising,
a first hollow fitting having a first end opposite a second end,
the first end having an externally threaded nipple portion
and the second end having an enlarged diameter sleeve
terminating in an annular detent,
a second hollow fitting having an annular groove on a reduced
diameter wall portion,
wherein the first hollow fitting and the second hollow fitting
are placed together in an overlapping condition such that
the annular detent fits into the annular groove; and
wherein a conventional sealant is inserted within the annular
groove.

11. (previously presented) The pipe coupling of claim 10 wherein
a conventional o-ring seal is located within a notch formed
between a shoulder of the first hollow fitting and a shoulder
of the second hollow fitting.

12.-13. (cancelled)

14. (previously presented) The pipe coupling of claim 10 wherein
the annular
detent is crimped inwardly.

15. (previously presented) The pipe coupling of claim 10 wherein
the second

hollow fitting having a first end opposite a second end, the
first end having a first well terminating in a second well
having a diameter greater than the diameter of first well.

16. (previously presented) The pipe coupling of claim 15 wherein
the first

well is separated from the second well by a shoulder.

17. (previously presented) The pipe coupling of claim 15 wherein
the first and

second wells being cylindrical in shape such that a second
pipe having an outside diameter complimentary to the diameter
of a well can be selectively and alternatively secured within
a well.

18. (previously presented) The pipe coupling of claim 10 wherein
the first end

of the first hollow fitting having a first well terminating
in a second well having a diameter greater than the diameter
of the first well.

19. (previously presented) The pipe coupling of claim 18 wherein
the first

well is separated from the second well by a shoulder.

20. (new) A pipe coupling for joining a first pipe to pipes of
varying diameters, comprising,

a first hollow fitting having a first end opposite a second end,
the first end having an externally threaded nipple portion
and the second end having an enlarged diameter sleeve
terminating in an annular detent,
a second hollow fitting having an annular groove on a reduced
diameter wall portion,
wherein the first hollow fitting and the second hollow fitting
are placed together in an overlapping condition such that
the annular detent fits into the annular groove; and
wherein a conventional sealant is inserted around the detent.
